

Gaurav Sharma

Solution Architect & Engineering Leader

Enterprise Architecture · Cloud-Native Distributed Systems · Data Platforms · Tech Strategy · Presales

Noida, India | +91 9899868295 | gaurav.x.sharma19@gmail.com | linkedin.com/in/gauravs19 | github.com/gauravs19

PROFILE

Results-driven, hands-on architect and engineering leader with 18+ years across financial services, payments, data platforms, and IOT/asset management. Expertise in cloud-native solutions, Domain-Driven Design, enterprise architecture, and end-to-end product engineering of high-scale SaaS solutions.

Combines deep delivery and P&L ownership with strategic presales, FinOps, and stakeholder management - turning complex business requirements into resilient, cost-optimized architectures that drive multi-million-dollar outcomes.

International delivery across the United States (H-1B), United Kingdom, and Japan.

TECHNICAL PROFICIENCY

Languages	: Java/JEE, Python, Scala, JavaScript, Angular
Architecture	: Microservices, Event-Driven & CQRS, Domain-Driven Design, Spring, REST API Design, NFR Governance, Scalability & Performance
Cloud & DevOps	: Azure (IoT Hub, DPS, Digital Twins/DTDL, Databricks), AWS, Docker, Kubernetes, CI/CD, Observability (tracing, alerting)
Data	: Apache Spark, Databricks, Delta Lake, ETL/Talend, Kafka, SQL & NoSQL, Data Engineering
Consulting & Scale	: Strategic Presales, RFP Advisory, Build-vs-Buy Analysis, Capability Mapping, FinOps, TCO/P&L, Estimation, Stakeholder Management
Applied AI Domains	: Agentic AI Orchestration, LLM RAG Pipelines, GenAI Workflows, Vector Databases : Financial Services & Payments, Building Management (Access/Facility/Energy), Enterprise Asset Management, Predictive Maintenance, Manufacturing, Energy, IoT, E-Commerce, EdTech

PROFESSIONAL EXPERIENCE

Solutions Architect • GlobalLogic

Jul 2019 – Present

Noida, India, Tokyo, Japan (Business Visa)

- Championed enterprise solution discovery and strategic presales, facilitating **CXO-level workshops (including on-site in Japan)** to capture complex requirements and define future-state IT roadmaps.
- Architected RFP responses and technical proposals using rigorous **Build-vs-Buy and FinOps analysis** to optimize enterprise budgets and technology investments.
- Directed architecture for a multi-tenant IoT-based **BMS unifying access, facility, and energy management** across 80K+ devices on Azure IoT Hub, DPS, and edge SDKs; standardized **OT-IT integration contracts using DTDL** (Digital Twins Definition Language).
- Architected core **Reliability Modeler** microservices on CQRS/event-driven patterns, integrating external systems for MILP optimization and work-order processing; built a Java **k-means rule engine over 300K+ intervention records** (200+ attributes).
- Conceptualized the **Data Platform** and pipeline orchestration on Spark + Databricks (Azure); health-check/data-correction services **cut data mismatches by 20%**, and multi-tenant configuration migration scaled the EAM platform to 300K+ assets.
- Defined and governed **NFRs** for multi-tenant SaaS (scalability, high availability, fault tolerance); engineered **observability** with distributed tracing and real-time alerting, holding 20+ KPIs.
- Led end-to-end **performance testing and optimization** — caching strategies, database query tuning, and backend throughput — to meet aggressive SLAs.
- Initiated **ML and GenAI prototypes** for asset maintenance: summarization, intervention classification, and predictive workflows over a data stream of 5M events per hour.

Technical Manager / Architect • Tavant Technologies

Aug 2017 – Jul 2019

Noida, India

- Directed the architecture of **PRISM**, a high-throughput Industrial IoT platform, leading two cross-functional teams from design to deployment.
- Stabilized releases from monthly to weekly while running a **zero-downtime Angular 8 migration**; raised sprint velocity by 15 story points.
- Implemented SQMS and API test automation (80%+ coverage), aligning to a successful **CMMI Level 5 audit**.
- Created the Estimation Abacus framework for fixed-bid estimation; ran customer brown-bag sessions and POCs, converting **three ideas into the product roadmap**.

SDE / Project Lead • American Express

Dec 2015 – Aug 2017

Gurugram, India & Brighton, UK (Bossiness Visa)

- Spearheaded payment-milestone deliveries **saving \$11M** over one year; orchestrated production rollouts to **three countries** for 3,000+ enterprise users.
- Initiated cloud adoption on American Express datacenters, **reducing security vulnerabilities by 50%**.
- Designed API specifications, contracts, and file formats for **real-time and batch integrations**; built ADM/REST integration to automate hierarchy changes.
- Built a SharePoint workflow handling 100+ change requests/day; presented a multilingual chatbot (hackathon runner-up).

Technical Lead • Sopra Steria

Dec 2013 – Dec 2015

Noida, India

- Steered the technical transition and performance optimization of a **20+ application Java portfolio** for a high-stakes client; integrated external systems over SOAP web services for approval workflows.
- Diagnosed and resolved critical **memory leaks and JVM/GC bottlenecks** using advanced profiling; enforced code-review and static-analysis quality gates (Checkstyle, PMD, FindBugs) with SQA audits.

Technology Analyst • Infosys Technologies

Dec 2007 – Dec 2013

Chandigarh, India & Salt Lake City, USA (on-site 2010–2013, H-1B)

- On-site at **American Express (USA)**: Led client discovery and offshore collaboration, bridging business stakeholders and offshore teams for 3 years; promoted to technical SME.
- Authored HLD/LLD and **versioning rules for the vPayment platform** enabling concurrent multi-client access; delivered mission-critical features for the **AmEx Gift Cards (BOL) inaugural India launch**.
- Architected high-volume **JMS/MDB asynchronous XML integration** and a CSV parser processing 50,000 records in 2 seconds; built a source-code & change-management process for the Vordel XML-policy codebase.

SELECTED PROJECTS

- **Enterprise BMS / IoT Platform (GlobalLogic)** — Multi-tenant building-management platform spanning access, facility, and energy management for 100K+ devices on Azure IoT Hub & Edge, with OT–IT data contracts standardized via DTDL. (<https://www.hitachi.com/en/press/articles/2024/09/0904a/>)
- **Reliability Modeler & EAM (GlobalLogic / Hitachi Lumada)** — CQRS/event-driven microservices, a 100K+ record rule engine with k-means classification, and a Spark + Databricks data platform; cut data mismatches by 50%. (<https://www.hitachienergy.com/products-and-solutions/asset-and-work-management/enterprise-asset-management>)
- **Global Virtual Payments — vPayment, BuyOnline, TOS (American Express / Infosys)** — API contracts, versioning, and real-time + batch reconciliation across three countries; contributed to \$11M operational savings. (<https://global.americanexpress.com/rewards/gift-cards>)
- **PRISM Industrial IoT (Tavant)** — IIoT platform released with weekly releases, 80%+ automation coverage, and a CMMI-assessed quality process. (<https://www.adsprism.com/>)
- **ArchPilot (Open Source Project)** — Agentic pipeline that transforms a single high-level requirement into deep discovery, EARS-compliant requirements, HLD, LLD, and a scored guardrail review, enforced by 36 enterprise rule files. (<https://gauravs19.github.io/archpilot/>)

AWARDS & RECOGNITION

Integrated Team & Leadership Excellence (GlobalLogic) · Delivery Excellence Award, UK/Canada rollout (American Express) · Geo-cluster award during US tenure (Infosys)

EDUCATION

Bachelor of Technology (B.Tech), Electronics & Communication — U.P. Technical University, 2007
